Problem: Create a Dashboard
Create a simple web application from the design provided below as a picture. The idea is to implement the UI elements from the page using Atomic Design Principles.

Technical Guidelines:
1. Use HTML, CSS (Plain or SCSS), and JavaScript.
2. Or You can use NextJs/React.
3. Focus on creating a clean and modular code structure.
4. Pay attention to the user interface and overall user experience.

Evaluation Criteria:
Candidates will be evaluated based on the following criteria:

Functionality: Does the application meet the specified requirements?
Code Quality: Is the code clean, well-organized, and maintainable?
User Experience: Is the user interface intuitive and visually appealing?
Bonus Features: If any bonus features are implemented, how well do they enhance the overall application?

Please use your own design or template (no specific asset, feel free to use any that relates)

As results please share link and github to email below :
